

***From Mark Goodman August 4, 2006***

**I have attached several images for you to use. I have just taken off my carbs to rebuild them. I also needed to spruce up the engine compartment and have the exhaust manifold high temperature powder coated. I hope that these are helpful to you.**

*Question from Jack Aeckerlin*

**Another puzzle is created by the Mech Service Parts List. Plate D9 shows as item 3 a Shaft - carburetor coupling. Two variations: 3 is for cars from 17551 to 25314, 3A is for cars from 25314 onwards. BUT: there is only one picture, of item 3. No picture of item 3A. And I definitely have a thing which looks very much like item 3, but my car is 29432! Can anybody tell me what 3A looks like?**

**Finally: air cleaners. There should only be a 'washer - joint - cleaner to carburetor' (AHB6019) used, but the studs on the cleaners are so long that I could easily pack twenty joints between the carb and the cleaner. Do I have the wrong type of air cleaner?**

**Many thanks in advance, as usual.**
